Site suitability according to IndustrialScore for Idstein: AAA

This place is within the first quartile in the national comparison.

1 National industry and logistics real estate market

The IW-IndustrialPort Industrial Real Estate Index (IWIP Index) has been tracking rental trends in the market for production, logistics, and warehouse spaces since 2012. The data analysis is based on a proprietary database that contains over 35,000 observations over the entire period.

The Industrial and Logistics Real Estate Index (IWIP) continues to show a positive development in rental prices for warehouse, logistics, and production properties in Germany in 2024, with an increase of 3.5%.

For more information, visit: <https://www.industrialport.net/industriemobilien-index-iwip/>

Notably, the value development of all analyzed real estate categories – albeit in some cases narrowly – exceeds that of the Consumer Price Index (CPI). Warehouse and production properties recorded an increase of 3.1% each, while logistics properties lead with a rise of 4.5%. Overall, the value development of 3.5% is below the previous year's figure of 4.5%, with logistics growth nearly halving at 4.5%. The CPI also lags significantly behind the previous year's increase, rising by only 2.2% compared to 5.9% last year.

2 Regional industry and logistics real estate market

Idstein is a town in the Rheingau-Taunus district in Hesse, distinguished by its historic old town and its attractive location in the Taunus. The town offers good access to the A3 motorway, which is an important traffic axis between Frankfurt am Main and Cologne. This convenient location makes Idstein an interesting site for industrial and logistics companies that wish to benefit from the proximity to the Rhine-Main and Rhine-Ruhr metropolitan areas.

In Idstein, there are several commercial areas that provide space for industrial and logistics properties. These areas are well-developed and offer modern infrastructure that meets the requirements of companies from various industries. The proximity to Frankfurt, one of Europe's most important logistics centers, is another advantage that makes Idstein attractive to companies reliant on efficient transport and supply chains.

The city administration of Idstein supports the establishment of companies through business-friendly conditions and active economic promotion. This includes providing information about available spaces and properties as well as assistance with approval procedures. The combination of a strategically favorable location, solid infrastructure, and a supportive administration makes Idstein a promising location for companies looking to expand or establish themselves in the Rhine-Main-Taunus region.

3 Statistical data

Federal State	Hessen	Metropolitan Area	Reg.-Bez. Darmstadt
County	Rheingau-Taunus-Kreis	Association of local authorities	Idstein, Stadt
Population	25,709	Population density	322 citizens per km²

10 Definitions

IndustrialScore (Site suitability analysis)

The ability for a location/Site suitability is a measure of the suitability of the municipality/city as location for the settlement/existence of industrial real estate. The ability for a location/ Site suitability was developed by IndustrialPort in conjunction with Hochschule Fresenius (Fresenius University of applied sciences).

For further information on the ability for a location/site suitability, please see website www.heatmap-magazin.de

Classification of Hall- and office areas

Warehouses are primarily used for the storage of goods. They often have a low ceiling height and have only a limited number of ground level gates or ramps.

	Equipment class A	Equipment class B	Equipment class C
Age of building	below 10 years	10 to 25 years	25 years and older
Hall height	8.5m or higher	6.0m until 6.8m	below 6.0m
Hall floor bearing capacity	minimum 5t/sqm	4.0t/sqm to 5t/sqm	below 4.0t/sqm
Gates	minimum 1 gate per 1,000sqm hall area	minimum 1 gate per 2,500sqm hall area	less than 1 gate per 2,500sqm hall area
Service area/switching area for trucks	broad	adequate	insufficient
Heating system	efficient	adequate	no heating system
Illumination daylight through	Daylight through light domes and window bands	Daylight through light domes or window bands	insufficient

Logistic halls combine storage and distribution functions. They have a higher hall height and depth and a higher number of ramp gates than conventional warehouses. Logistics halls are usually heated and equipped with a sprinkler system.

	Equipment class A	Equipment class B	Equipment class C
Age of building	below 10 years	10 to 25 years	25 years and older
Hall height	10.5m or higher	7.0m until 10.5m	below 7.0m
Hall floor bearing capacity	minimum 5t/sqm	4.0t/sqm to 5t/sqm	below 4.0t/sqm
Gates	minimum 1 ramp gate per 1,500sqm hall area plus ground level gates	minimum 1 ramp gate per 2,500sqm hall area	less than 1 ramp gate per 2,500sqm hall area
Service area/switching area for trucks	broad	adequate	insufficient
Heating system	efficient	adequate	no heating system
Illumination through daylight	Daylight through light domes and window bands	Daylight through light domes or window bands	insufficient

Production halls primarily serve the production of goods. They are mostly heated and have walk-in roller doors, daylight and partly crane systems.

	Equipment class A	Equipment class B	Equipment class C
Age of building	below 10 years	10 to 25 years	25 years and older
Hall height	6.5m or higher	5.5m to 6.5m	below 5.5m
Hall floor bearing capacity	minimum 5.0t/sqm	4.0t/sqm to 5.0t/sqm	below 4.0t/sqm
Gates	minimum 1 ground level gate per 1,500sqm hall area plus ramp gates	minimum 1 ground level gate per 3,000sqm hall area	less than 1 ground level gate per 3,000sqm hall area
Service area/switching area for trucks	broad	adequate	insufficient
Heating system	efficient	adequate	no heating system
Illumination through daylight	Daylight through light domes and window bands	Daylight through light domes or window bands	insufficient

The indicated rental prices of **office spaces** refer exclusively to office space in commercial and / or industrial areas, which are located directly in or on an indoor area.

	Equipment class A	Equipment class B	Equipment class C
Age of building	below 10 years	10 to 25 years	25 years and older
Ceiling height	3.0m or higher	2.5m to 3.0m	below 2.5m
Sun protection	External blinds, electrically operated	External blinds, manually operated	No sun protection
Cabling	False floor	Raised floor	Window sill duct
Cooling	Air conditioning	Cooling ceiling	No cooling
Security technology	Access control, additional video control	Access control	No security technology

Median

The median is an average for distributions in statistics. The median of a number of values is the number that is in the mid position when sorting the values by size. Generally, a median divides a sample, a number of values, or a split into two halves, such that the values in one half are smaller than the median, and larger in the other.

The median belongs to the group of quantiles and can also be considered as a 0.5-quantile. Compared to the arithmetic mean, often called average, the median is more robust against outliers (extremely differing values).

Market rent

The indicated market rent are the medians of the asking rents on the basis of the focused community. For this purpose, all offers in all major real estate portals were evaluated and then clustered according to main types of use and facility/equipment classes. Besides comparable object types and location, comparable soil values are also used. The median results from at least five comparable buildings.

The rents are shown separately according to the equipment classes modern (A), functional (B) and simple (C) as well as the main utilisation types logistics, warehouse (storage) and production, amounting to Euro per each square meter (€/sqm) for the gross floor area (BGF).

To avoid the problem of "outliers" in the data groups, no median were deliberately chosen.

The indicated rental prices for office spaces refer exclusively to office space in commercial and / or industrial areas, which are located directly in or on an indoor area.

¹Average rents for the chosen equipment class in Idstein (RGS 064390008008) in 2024

²Average rent of chosen equipment class of all cities and municipalities in Germany in 2024 with a comparable site suitability rating as Idstein (see section: IndustrialScore)

³Deviation of rent¹ in 2024 to the national average² of all comparable locations in 2024

Property interest rate

Property rate §21 para. 2 of the ImmoWertV (Ordinance on the Valuation of Property).

"Property interest rates are capitalization interest rates with which the market values of properties are typically interest-bearing on average, depending on the type of property. Property interest rates are determined according to the principles of the income approach as per §§ 27 to 34, based on suitable purchase prices and the corresponding net incomes."

They are to be derived on the basis of suitable purchase prices and their corresponding net income for similarly constructed and used land, taking into account the remaining useful life of the buildings in accordance with the principles of the capitalized earnings method (§§ 17 to 20).

The real estate yield is calculated using a converted earnings formula (income value method) analogous to ImmoWertV. The determination here is carried out iteratively.

The stated real estate yield is at community level. The classification A, B and C refers to an industrial property with:

- A: Building age under 10 years
- B: Building ages between 10 and 25 years
- C: Building age older than 25 years

In case of mature industrial plants, the building age per building part or the fictitious mean building age of the entire plant must be used.

Administrative costs

Administrative costs are, according to §19 ImmoWertV, costs for the manpower and facilities necessary for the administration of the property as well as the legal or voluntary examination of the annual financial statement and supervision.

²Average administrative costs of chosen equipment class of all cities and municipalities in Germany in 2024 with a comparable site suitability rating as Idstein (see section: IndustrialScore)

³Deviation of administrative costs in 2024 to the national average² of all comparable locations in 2024

Maintenance costs

Maintenance costs are costs incurred to keep the building in its intended and contractual condition. In this case, the costs of the commercial tenancy agreement can in principle be assigned to the tenant, the landlord or even partially to both contracting parties.

²Average maintenance costs of chosen equipment class of all cities and municipalities in Germany in 2024 with a comparable site suitability rating as Idstein (see section: IndustrialScore)

³Deviation of maintenance costs in 2024 to the national average² of all comparable locations in 2024

Standard deviation

The standard deviation is defined as the square root of variance. It indicates the range of typical values in a population (ca. 68% for normal distributions) when added to/subtracted from the median. In order to give normalized information, it is expressed as a percentage of the respective average for each indicator. The farther outside the boundaries of one standard deviation a value is, the less common it is within the population.
